Leverage your network

# VoxIP

## Advanced Alert Module

The VoxIP Advanced Alert Module automates day to day tasks and alerts you via SMS text or email messages when a condition occurs. This upgrade to your system enhances security and daily management of your voice environment. Plus additional capabilities allow you to deploy more capable devices for emergency notifications and support requests.

### 911 Monitoring

If any extension dials 911 you can receive an alert with information detailing who, when and what extension dialed 911 to make your response that much quicker. SRO officers, principals and any personnel can be group to receive an alert. Also customize each location with the support personnel who will respond to any emergency issue. Only notify the personnel who needs to respond.

### Device Monitoring

Monitor every SIP endpoint in realtime to see when any device loses registration or has login issues. You can receive an alert with the device ID to quickly respond to loss of communication. Also use this alert to troubleshoot network issues during connection issues as well.

### Telecom Connection Monitoring

Continuously monitor your SIP trunks in real time and be notified when your registration is lost to your SIP trunking provider. Historical reporting is available to see the productivity of your provider with monthly, weekly and daily reports.

### Reporting Module

Gather historical data and run reports to identify and evaluate your voice environment. Information about your system and environment will be valuable for identifying problems and creating resolutions.
