

Data Protection  
For Your Enterprise

IP Convergence brings you StoreIP for your data protection. StoreIP provides data protection for all of your devices throughout the enterprise. Single web based interface to manage all of your backups, track devices and even wipe in real time devices that are no longer authorized to access your corporate data. You control encryption keys and can support mobile devices as well.

### Features and Options

- Bare metal backup and recovery for Exchange, SQL, Sharepoint, and more (optional)
- Native backup and recovery for Exchange 2010 servers
- Exchange Granular Recovery allows you to backup and recover by mailbox and by message
- Backup and recover laptops, workstations, file servers, and files and folders.
- Military-grade encryption – three-tiers of protection for your business data
- Send transactional consistent bare metal images of your backups to the cloud

## Remote monitoring, management and control

- StoreIP has the ability to monitor and manage your account remotely. Rest easy knowing that we have the ability to schedule your backups and apply remote backup policies at any time of day, keeping your data safe 24/7.
- Our Dashboard allows us to do the following remotely, on the fly
- Create new accounts
- Modify account details and storage quotas
- Assign bare metal backup licenses, if needed
- Create or modify remote backup policies to apply to your account
- Report on your backups and their success

## Protect All Of Your Devices

- Servers/Virtual Server Clusters
- Desktops/Laptops
- Mobile Devices

Full featured backup on all of your devices that access your proprietary data.
