

IP Convergence who manufactures the enterprise telephone system VoxIP has selected ZoiPer as the preferred soft client for users who want to extend SIP based communications to their smart phone devices. By utilizing your 802.11 network you can load the zoiper client and receive and make SIP based calls through your VoxIP system.

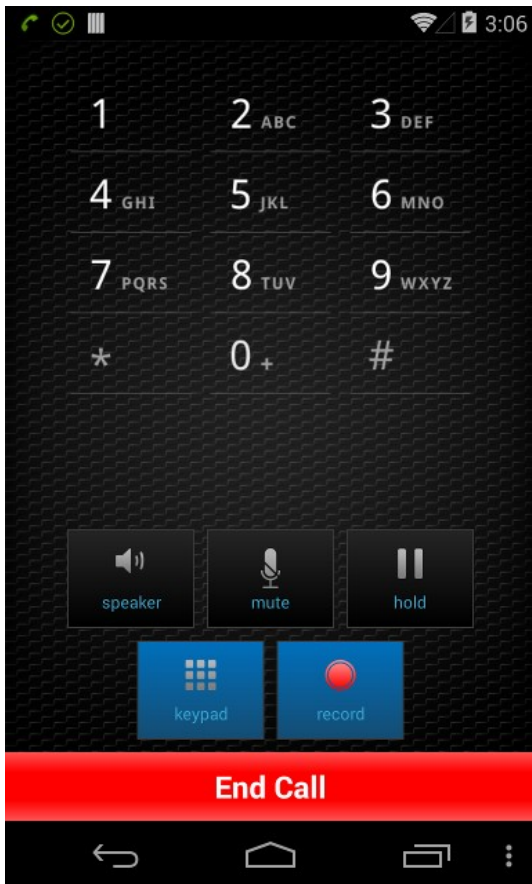

Answer incoming calls forwarded to your Zoiper client.

Use your account list to make calls from your client

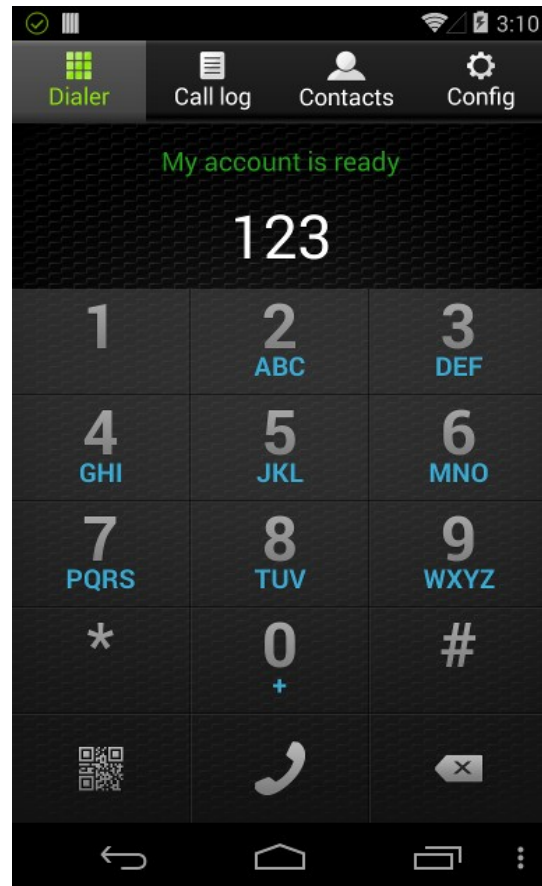

Client acts as a SIP peer and has all features as a regular hand set on your VoXIP system.

Full call recording features with storage on your smart phone device.

Easy extension to extension or external calling.

Support for any existing mobile device or tablet for SIP endpoints.
