MDF/IDF Monitoring Support Offerings for 2015

Malware gets most of the attention from of IT staff and businesses. Your environmental conditions should be monitored and managed as well. Power loss, humidity, temperature, water pipe brakes and even access control are just as devastating and even more long term damaging than high profile virus issues. IP Convergence can provide 24/7/365 monitoring services for 1 server to an entire server room full of equipment.

Power Management – IP Convergence can monitor real time power to your mission critical devices. From your power loss, percentage of UPS available, total power usage, phase 2 and phase 3 power plus the base lining of power usage. IP Convergence can provide you the real statistics when deploying new devices or designing new locations.

Disaster Conditions Notifications – Your server room has to be environmentally controlled 24/7/365 and IP Convergence can notify you when a disaster is going to or has begun. High and low temperature conditions, out of range humidity situations, water pipe breaks, smoke/fire and even unauthorized access. Our customers know exactly what their server room environmental conditions are down to the second.

Remote Notifications - Our customers are notified 24/7/365 via text or email notifications. Each probe can be uniquely configured to the proper destination for event notifications. Staging of notifications provide the proper backup or fail over if a condition is not responded to in a timely fashion.

Reports/Logging Correlation – IP Convergence provides our customers monthly reporting to establish baselines for their environmental conditioned rooms. These reports provide exact and precise information on the conditions of their MDF & IDF closets. Clients have the proper information to make decisions on how to provide the correct conditions for their expensive equipment.
