Advanced Alert Module(AAM)

Meet The Federal Laws On 911 Monitoring And Alerting

Kari Law

Your multi line telephone system(MLTS) must be able to deliver 911 calls with or without outside access codes. If any phone dials 911 or 9,911 or any other combination you must configure your MLTS to deliver that 911 call to emergency PSAP services unfiltered.

Baum Law Requirement 1 e911

Each physical location must have a unique outpulse caller ID for address verification. If you location has multiple floors each floor must have a unique number to meet the e911 requirements.

Baum Law Requirement 2 Precise Location

Every 911 call must also provide the room number for "precise location" for the 911 operators to direct responding emergency personnel.

Baum Law Requirement 3 On-Site Personnel

Every 911 call must also notify on-site personnel to that emergency situation as well. Build your response teams by physical locations.

The AAM system meets all requirements and can provide coverage for single or multiple locations. Give us a call to help you become compliant under these new federal mandates
