Leverage your network

## Access Control Module

### 24/7/365 Access Control Monitoring

#### Industry's Most Robust Access Control System

System is powered by Linux operating system for maximum uptime to monitor your points of entry and exit. Web manageable from any defined IP allowed web device.

#### Scheduled Access For Public Areas

Provide daily schedules on allowing or preventing access to hallways external doors, etc. with day and time scheduling.

#### Centralized Appliances Allow Enterprise Management

Have single unit manage all of you access control units from a single location. IP connectivity provides you to deploy access control units anywhere your can connect to them. Push all configurations to your units from one appliance. Units store last config push even in a power loss situation.

#### Remote Notification Of Failed Access

Set the number of failed attempts to alert you of unauthorized access attempts. Receive a SIP call, SMS or email alerts of failed access attempts.

#### SMS / E-Mail & SIP Alerts

Receive SMS text alerts, email or SIP recorded message from EnviroTrack approved SIP endpoint.

#### Automated Config Backups

Scheduled backups of your configurations to protect against device failures. Speed up disaster recovery times.

#### Syslog Change Capture

Monitor all commands entered via syslog server services. Enable syslog to your Envirotrack appliance and capture every command entered via the CLI and web mangement interfaces on every network device in your environment.
