

IP CONVERGENCE
Leverage your network

Network Monitoring Module

24/7 Network Device Monitoring

Industry's Most Robust Monitoring System

System is powered by Linux operating system for maximum uptime to monitor your network device environment. Web manageable from any web Browser.

Monitoring Device Uptime

Monitor and manage routers, switches, firewalls, servers, etc. any IP enabled device that is internal or external to your network.

Create Reports Off Hardware Performance Statistics

Based off response times build statistical and event performance information. Evaluate device and connectivity information used for proactive troubleshooting and get in front of any issue.

Evaluate Network Connectivity Link Issues

Build performance statistics to evaluate the integrity of your leased lines, Internet connections and private circuits. Information gathered can combat telcos reluctance on admitting service problems. Real time gathering of data status from your expensive service provided circuits.
